

Tank-Mix Sequence Procedures

- Start with a clean sprayer before mixing a load with Enlist One® or Enlist Duo® herbicides.
- Recommended water carrier volume with Enlist herbicides is 10-15 gallons per acre.
- Consult [Enlist.com](https://www.enlist.com) or Enlist Product Use Guide for qualified nozzles and corresponding pressure ranges.
- Find the most current list of qualified tank-mix products for Enlist Duo and Enlist One at [EnlistTankMix.com](https://www.enlist.com/enlist-tank-mix).

Mixing steps

- Begin with half-full tank of water carrier
- Begin agitation and continue throughout mixing process
- Add products in order, one at a time:
 - 1. AMS / water conditioning agents**
 - » When using a dry AMS product, allow at least 5 mins of agitation to ensure product is fully mixed into water; additional time may be required when using cold water.
 - 2. Pre-slurry water-soluble packets**
 - 3. Wettable powders/dry flowables**
 - 4. Compatibility agents**
 - 5. Liquid flowables**
 - 6. Capsule suspension (CS) or suspension emulsion (SE)**
 - 7. Emulsifiable concentrate (EC), such as s-metolachlor**
 - 8. Soluble liquids (SL)**
 - » Glufosinate products, including Liberty® herbicide
 - » Enlist Duo herbicide at 4.75 pt/A or Enlist One at 2 pt/A
 - » Other SL products, including glyphosate
 - 9. Crop Oil Concentrate (COC), NIS, other adjuvants**
 - 10. Top off with water carrier**

Note on mixing with glyphosate products: When mixing with Enlist One, do not pour glyphosate products into the tank at the same time as Enlist One, and do not allow concentrated products to come into contact. Add products one at a time, allowing enough time for recirculation between additions of each separate product. Failure to add products one at a time, use sufficient water during agitation, or allow sufficient agitation may result in salting out.
