Enlist™ Corn

Easy-to-use, exceptional weed control that provides an economical edge.

Enlist™ corn gives you the most advanced herbicide-tolerant trait technology on the market – enabling exceptional weed control with flexible options for weed control.

One system stands alone – get the weed control that you deserve.

<table>
<thead>
<tr>
<th>Tolerances</th>
<th>Wide application window</th>
</tr>
</thead>
<tbody>
<tr>
<td>2,4-D choline &amp; glyphosate tolerance enable the use of Enlist One® and Enlist Duo® herbicides</td>
<td>Enlist herbicides on Enlist™ corn</td>
</tr>
<tr>
<td>FOP tolerance enables the use of Assure II herbicide (quizalofop) for postemergence grass control and control of volunteer non-Enlist corn in Enlist corn fields.</td>
<td>No larger than V8 or 30 inches</td>
</tr>
<tr>
<td></td>
<td>Fewer plant-back restrictions with Enlist™ corn means you get more rotation flexibility compared with other burndown and postemergence herbicides.</td>
</tr>
<tr>
<td></td>
<td>Same application window you’re used to with glyphosate.</td>

</tbody>
</table>

Apply with confidence to take down the toughest weeds, including:

- Common ragweed
- Giant ragweed
- Morningglory
- Palmer amaranth
- Marestail
- Velvetleaf
- Lambsquarters
- Waterhemp

“Enlist Duo does an excellent job of controlling the weeds. It is efficient, simple and very effective.”

– Steve Bireline, Iowa corn farmer
Complete convenience.

Only Enlist Duo® herbicide combines the proven performance of 2,4-D choline and glyphosate. The two sites of action work together to deliver control of yield-robbing weeds and help prevent resistance.

**Application rate:** 4.75 pt./A

---

Additional tank-mix flexibility.

Enlist One® herbicide provides additional tank-mix flexibility with other herbicides, fungicides and insecticides, allowing for a customized weed control program to fit each farm. Farmers gain superior control of resistant and hard-to-control broadleaf weeds.

**Application rate:** 2 pt./A

---

On-target application.

90% less drift than traditional 2,4-D

The drift reduction from Colex-D® technology combines with low-drift nozzles to cut drift by as much as 90% compared with traditional 2,4-D.

96% less volatile than 2,4-D ester

Near-zero volatility – up to 96% less than 2,4-D ester – helps keep Enlist™ herbicides in place and improve control.
