

# ENLIST™ COTTON

## Exceptional weed control compatible with your peanut cropping system.

Enlist™ cotton lets you take control of weeds like never before with robust tolerance to 2,4-D choline, glyphosate and glufosinate. These multiple modes of action allow you to choose from the flexibility of Enlist One® herbicide or the convenience of Enlist Duo® herbicide. And because peanuts are naturally compatible, you can apply Enlist herbicides right up to an adjacent peanut field regardless of wind direction. Now you can control weeds your way for improved weed resistance management.

### TOLERANCES

#### Enlist™ cotton

- 2,4-D choline
- Glyphosate
- Glufosinate

### WIDE APPLICATION WINDOW

#### Enlist™ cotton

Up to midbloom

Enlist™ cotton has no plant-back restriction after using an Enlist herbicide for burndown.

Same application window you're used to with glyphosate.

Even the toughest weeds don't stand a chance, including:

- ✔ Common ragweed
- ✔ Marestalk<sup>1</sup>
- ✔ Giant ragweed
- ✔ Velvetleaf
- ✔ Morningglory
- ✔ Lambsquarters
- ✔ Palmer amaranth<sup>1</sup>
- ✔ Waterhemp

## Enlist™ cotton is naturally compatible with peanuts.

Enlist herbicides can be applied right up to an adjacent peanut field edge, regardless of wind direction.

- Like Enlist cotton, peanuts are inherently tolerant to 2,4-D and 2,4-DB.
- Peanuts are not classified as a susceptible crop to Enlist herbicide labels.

"The Enlist system definitely has value on farms in our area because peanuts can tolerate 2,4-D. We can spray an extra herbicide and not worry about damaging peanuts or corn."

– Austin Warbington,  
Georgia cotton farmer

"Enlist Duo herbicide completely cleaned up the field. I followed up with glufosinate a week later, and it worked really well."

– Jack Kent,  
Arkansas cotton farmer

## Complete convenience.

Only Enlist Duo® herbicide combines the proven performance of 2,4-D choline and glyphosate. The two modes of action work together to deliver control of yield-robbing weeds and help prevent resistance.

APPLICATION RATE	
Glyphosate-resistant or hard-to-control weeds	4.75 pt./A

## Additional tank-mix flexibility.

Enlist One® herbicide provides additional tank-mix flexibility with glufosinate and other qualified tank-mix products, allowing for a customized weed control program to fit each farm. Farmers gain superior control of resistant and hard-to-control broadleaf weeds.

APPLICATION RATE	
Glyphosate-resistant or hard-to-control weeds	2 pt./A

## On-target application.

### 90% less drift than traditional 2,4-D

The drift reduction from Colex-D® technology combines with low-drift nozzles to cut drift by as much as 90% compared with traditional 2,4-D.

### 96% less volatile than 2,4-D ester

Near-zero volatility – up to 96% less than 2,4-D ester – helps keep Enlist™ herbicides in place and improve control.

VISIT [ENLIST.COM](http://ENLIST.COM) TO LEARN MORE ABOUT HOW THE ENLIST™ WEED CONTROL SYSTEM CAN HELP YOU TAKE CONTROL OF WEEDS LIKE NEVER BEFORE. FIND THE MOST CURRENT LIST OF QUALIFIED TANK-MIX PRODUCTS FOR ENLIST DUO® AND ENLIST ONE® HERBICIDES AT [ENLISTTANKMIX.COM](http://ENLISTTANKMIX.COM).

<sup>1</sup>May require a broader management plan including timely application and use of a soil residual herbicide.
