ENLIST™ COTTON

Exceptional weed control that’s easy to use and flexible to fit your operation.

Enlist™ cotton lets you take control of weeds like never before with robust tolerance to 2,4-D choline, glyphosate and glufosinate. These multiple modes of action allow you to choose from the flexibility of Enlist One® herbicide or the convenience of Enlist Duo® herbicide. Now you can control weeds your way for improved weed resistance management that works with your cropping rotation.

“We had no drift issues whatsoever. We have a watermelon and cantaloupe farmer in the area, so we were very concerned about drift. With Enlist Duo, we had absolutely no drift.”

— Jack Kent, Arkansas cotton farmer

“The tank mix of 2,4-D choline and glufosinate really did exactly what we wanted it to. Two weeks after application, we had excellent control. We were able to almost eliminate most weeds. It really took care of business.”

— Austin Warbington, Georgia cotton farmer

Adding the Enlist™ weed control system to your operation is simple.

• Enlist cotton is compatible with nearby nonsusceptible crops such as soybeans without the Enlist trait, corn, peanuts, alfalfa and wheat. You can apply Enlist herbicides on Enlist cotton planted right next to these nonsusceptible crops without a buffer.

• The reduced potential for physical drift and near-zero volatility with Enlist herbicides help keep it off your cotton without the Enlist trait.

WIDE APPLICATION WINDOW

Enlist™ cotton
Up to midbloom

Enlist™ cotton has no plant-back restriction after using an Enlist herbicide for burndown.

Same application window you’re used to with glyphosate.

Even the toughest weeds don’t stand a chance, including:

- Common ragweed
- Marestail
- Giant ragweed
- Velvetleaf
- Morningglory
- Lambsquarters
- Palmer amaranth
- Waterhemp

Even the toughest weeds don’t stand a chance, including:

- Lambsquarters
- Palmer amaranth
- Waterhemp
Complete convenience.

Only Enlist Duo® herbicide combines the proven performance of 2,4-D choline and glyphosate. The two modes of action work together to deliver control of yield-robbing weeds and help prevent resistance.

Application Rate

| Glyphosate-resistant or hard-to-control weeds | 4.75 pt./A |

Additional tank-mix flexibility.

Enlist One® herbicide provides additional tank-mix flexibility with glufosinate and other qualified tank-mix products, allowing for a customized weed control program to fit each farm. Farmers gain superior control of resistant and hard-to-control broadleaf weeds.

Application Rate

| Glyphosate-resistant or hard-to-control weeds | 2 pt./A |

On-target application.

90% less drift than traditional 2,4-D

The drift reduction from Colex-D® technology combines with low-drift nozzles to cut drift by as much as 90% compared with traditional 2,4-D.

96% less volatile than 2,4-D ester

Near-zero volatility – up to 96% less than 2,4-D ester – helps keep Enlist™ herbicides in place and improve control.
