TAKE CONTROL OF WEEDS LIKE NEVER BEFORE.
Choose advanced herbicide and trait technology.
Leading technology maximizes yield potential.

The Enlist™ weed control system adds tolerance to new 2,4-D choline, building on the glyphosate system in cotton, soybeans and corn. It also adds tolerance to glufosinate in cotton and soybeans and to FOP herbicides in corn. By expanding crop tolerance and delivering unrivaled weed control, the Enlist system helps you maximize yield potential.

“Enlist will allow me to grow more acres more efficiently.”
MALCOM HAIGWOOD, ARKANSAS FARMER

Get the most from the Enlist™ system.

The Enlist Ahead management resource provides the tools, training and rewards to help farmers get the best results from the Enlist system – today and in the future.

From management recommendations to technology advancements, Enlist Ahead is designed to help farmers make on-target applications and responsibly manage resistance in the field.

1. **Tools and resources**
   Easy-to-follow best management practices and resources allow you to apply Enlist herbicides with confidence.

2. **Education and training**
   Enlist 360 training demonstrates how this advanced system performs – and how to make the most of this technology in the field.

3. **Exclusive rewards**
   Exclusive access to reward programs help you get the best results from the Enlist system.
Tough weeds don’t stand a chance.

The Enlist™ system gives farmers choices for weed control using new 2,4-D choline and Colex-D® technology. Enlist Duo® herbicide with Colex-D technology combines the proven performance of 2,4-D choline and glyphosate. New Enlist One™ herbicide is a straight goods 2,4-D choline product with Colex-D technology that provides additional tank-mix flexibility with products listed on EnlistTankMix.com, such as glufosinate, glyphosate, residual herbicides and insecticides. Farmers can customize a weed control program to fit their farms.

The result: unrivaled weed control designed to land and stay on target.

Proprietary Colex-D® technology
The innovations introduced with Colex-D technology will help farmers and applicators address challenges beyond controlling tough weeds.

- Near-zero volatility
- Minimized potential for physical drift
- Improved handling characteristics
- Low odor

90% less drift than traditional 2,4-D
The drift reduction from Colex-D technology combines with low-drift nozzles to cut drift by as much as 90% compared with traditional 2,4-D.

96% less volatile than 2,4-D ester
Near-zero volatility – up to 96% less than 2,4-D ester – helps keep Enlist herbicides in place and improve control.

“Enlist Duo controlled weeds I’ve been struggling with for the last five years.”
STEVE BIRELINE, IOWA FARMER

“Enlist One did exactly what we wanted with no movement. It really took care of business.”
AUSTIN WARBINGTON, GEORGIA FARMER
