ENLIST™ HERBICIDES
TANK-MIX SEQUENCE PROCEDURES

Be sure to start with a clean sprayer before mixing a load with Enlist herbicides. Remember the required water carrier volume with Enlist herbicides is 10-15 gallons per acre. For more tips on sprayer setup, see the Enlist herbicides application guide.

LIQUID CARRIER

• Begin with half-full tank of water
• Begin agitation and continue throughout mixing process
• Add products in order:
  1. AMS / water conditioning agents
  2. Pre-slurry water-soluble packets
  3. Wettable powders/dry flowables
  4. Compatibility agents
  5. Liquid flowables
  6. Capsule suspension (CS) or suspension emulsion (SE)

  7. Emulsifiable concentrate (EC)
     - Soluble liquids (SL)
     - Enlist Duo® herbicide at 4.75 pt/A
     - Enlist One™ herbicide at 2.0 pt/A – When mixing with Enlist One, do not pour glufosinate ammonium products or glyphosate potassium into the tank at the same time as Enlist One. Add products one at a time, allowing enough time for recirculation between additions of each separate product.
     - Glyphosate products

  8. Crop Oil Concentrate (COC), NIS, other adjuvants

  9. Top off with water carrier
